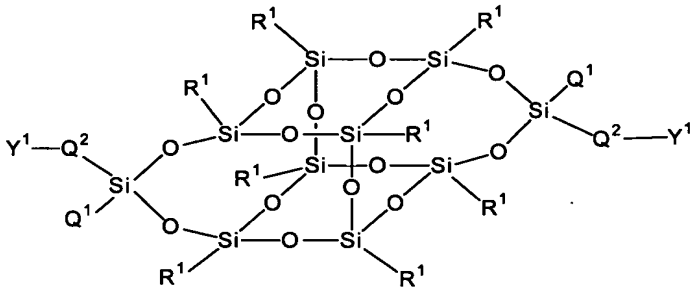
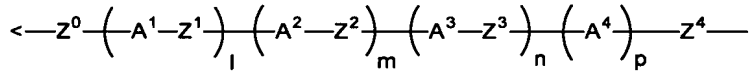
ABSTRACT OF THE DISCLOSURE

The present invention relates to a compound represented by Formula (1) and a polymer obtained using the compound:



(1)

wherein R^1 is phenyl which may have substituents, Q^1 is hydrogen, halogen, alkyl having 1 to 10 carbon atoms, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cyclohexenyl or phenyl in which optional hydrogen may be replaced by halogen or alkyl having 1 to 5 carbon atoms,



(2)

and Q^2 is a group represented by Formula (2):
wherein the code < represents a bonding point with silicon, l, m, n and p are independently 0, 1, 2 or 3, A^1 to A^4 are independently a single bond, 1,4-cyclohexylene, 1,4-cyclohexenylene, a condensed ring group having 6 to 10 carbon atoms which is a divalent group, or 1,4-phenylene, Z^0 to Z^3 are independently a single bond, -CH=CH-, -C≡C-, -COO-, -OCO-, or alkylene having 1 to 20 carbon atoms, and Z^4 is a single bond, -CH=CH-, -C≡C-, -COO-, -OCO-, or alkylene having 1 to 20 carbon atoms. And Y^1 in Formula (1) is the group defined in Claim 1.
